Supplementary Figure: BioGRID (build 3.1.103) derived networks. A. IP/MS interactome from overlap of individual immunoprecipitation experiments, 176 proteins with 1031 connections. B. Transcriptomic interactome, 3534 proteins with 6054 connections. C. Intersection of A and B representing the overall 3-M interactome, 131 proteins with 721 connections. Physical interactions in orange, physical and genetic interactions in blue.
